

[DRAFT] Data Sheet E – Results of Internal Review Committee

Date of Review/Recommendation: February 2, 2009

Water Body Under Evaluation:

Water Body ID #: 1179
Name: Starvey Creek (Class C)
Length of Segment: 3.0 miles
County(ies): Dallas

Use Attainability Analysis (UAA) Study:

UAA ID #: 0779
Submitter: MEC Water Resources
Date(s) Conducted: October 5, 2007
Date Received: December 1, 2007
Use Evaluated: Whole Body Contact Recreation (WBCR)

UAA Criteria Evaluated:

- ☐ 1-Natural Pollutant Sources.
☒ 2-Natural, Ephemeral, Intermittent or Low-Flow Condition.
☐ 3-Non-Remedial, Human Caused Condition.
☐ 4-Hydrologic Modifications.
☐ 5-Natural Physical Features.
☐ 6-Substantial, Widespread Social and Economic Impact.

Use Determination & Recommendation:

Has the use existed since November 28, 1975? ☐ Yes ☐ No ☒ Unknown

Comments: The UAA survey was conducted in October 2007 and no WBCR was observed. No interviews were conducted during the survey.

Is the evaluated use attainable? ☒ Yes ☐ No

Comments: All three survey sites were clustered together in the middle of the segment, and the stream did not meet the depth criteria at any of them. However, another UAA (#0665) was completed on October 11, 2007 by SES, Inc. during which an upstream pool was found to meet the maximum depth criterion. The review committee for that UAA recommended that WBCR use be retained, and that decision is part of the 2008 revisions to the water quality standards. Because of the limited survey area of this UAA, as well as the depth found in UAA #0665, this committee concurs with the previous committee's recommendation that the WBCR use designation be retained.

Committee Recommendation:

☐ Add Use ☒ Retain Use ☐ Remove Use
☐ Modify Use ☐ Inconclusive
